The tornado touched down northwest of Oxford near the intersection of S County Road 200 E and E County Road 500 S. It tracked northeast for over 10 miles before crossing into southwest White County at E County Road 100 S. It lifted just east of South County Road 850 W at S US Hwy 231 in rural White County. The storm primarily downed trees and damaged farm outbuildings. However, it also caused damage to a few homes. The tornado is believed to have reached EF-2 intensity with wind speeds near 115 mph after crossing S County Road 875 E where large portions of a roof and some siding were torn off of a home.

The tornado dropped south of Goodland in rural Benton County south of E County Road 800 N east of N County Road 200 E. The storm tracked northeast and crossed into Jasper County at E County Road 900 N southwest of Remington. It lifted east of town north of W US Hwy 24 just west of N County Road 1200 W. Damage mostly consisted of snapped power poles, downed trees, and damage to small farm outbuildings.

During the afternoon and evening of the 31st, a wave of severe thunderstorms produced numerous tornadoes, severe hail, and extensive wind damage across northwestern Indiana. A total of 23 tornadoes were confirmed across the state. The NWS Chicago office tied a record for the most tornadoes to occur in a single calendar day within the office's county warning area with 22, 5 of which occurred in Indiana. These 22 tornadoes contributed to the 145 confirmed across the country from March 31 through April 1 making this event the third largest tornado outbreak in U.S. history. Two EF-2 tornadoes occurred in Benton County and one other in Lee County, Illinois. Some of the more notable damage includes a few homes with walls and portions of roofing blown away, a wind turbine that had been snapped in half, and wind turbine blades thrown as far as 600 yards, all a result of the two EF-2 tornadoes in Benton County.
